1. There are 23 questions in the paper. All are compulsory.
 2. Tick or circle the option which is your answer.
 3. Show your working on a separate sheet of paper wherever you need to.
 4. Please check your answers carefully before submitting the test. Once submitted, the answers CANNOT be changed.

Read the passage below and answer the questions that follow.

The Tiger

The tiger is the largest of all cats like the jungle cat, the cheetah, the leopard, the lion, etc. It is one of the most fearsome hunters in the world. A typical male Siberian tiger may weigh 227 kgs. It may also measure more than 180 cms from the nose to the tip of the tail.

The tiger's gold colouring with black stripes allows it to hide easily in its environment. Tigers can travel long distances and jump up to 900 cm in one leap. They roar to challenge other tigers at a distance, and to protect their living area from attackers. It is said that a tiger can judge the size of another tiger simply from the loudness of its roar.

Tigers can hunt and eat just about any animal, but no other animal can hunt the tiger. They hunt by sight and sound. They have been known to eat crocodiles, fish, birds, reptiles, and even hunters like leopards and bears. However, their favourite food is the flesh of animals such as deer and wild pigs.

It is said that only 5,100 to 7,500 tigers now remain in the entire world. People have hunted tigers for hundreds of years. Humans are the biggest problem to the tiger population of the world.
